

SUMMARY :

In this assignment we had been given a dataset extracted from the NSE website in which the Stock price data has been provided from 1-Jan-2015 to 31-July-2018 for six stocks Eicher Motors, Hero, Bajaj Auto, TVS Motors, Infosys and TCS. In this our main aim was to get the “moving average” and “signals for buying ,selling ,hold of stocks ”, as both these things matters a lot while dealing with stocks as the signals are provided by the help of moving average itself. This project helps us in recalling almost all the concepts we have learned till now and we also learned how to use SQL for doing prediction/giving signals for stock market, with the help pf this project we learned how to deal with such a large database.
